

## Font Features for Awami Nastaliq

The Awami Nastaliq font includes a number of optional features that provide alternative rendering that might be preferable for use in some contexts. The chart below enumerates the details of these features. Whether these features are available to users will depend on both the application being used.

In LibreOffice 5.2+ (<http://www.libreoffice.org/download/>) you should first enable complex text layout. To do this, go to **Tools / Options / Language Settings / Languages** and then select **Enabled for complex text layout (CTL)**. This will allow you to select Right-to-Left for paragraphs.

In order to “turn on” a Font Feature in LibreOffice 5.2+, you must select the font and then type “:” followed by the feature ID, followed by “=” followed by the value. So, for example, you might select “Awami Nastaliq:hehk=0” to turn off the hook on the medial heh-goal.

If you wish to apply two (or more) features, you can separate them with an “&”. Thus, “Awami Nastaliq:hehk=0&hedo=1” would apply the “Hook on medial heh-goal” feature plus the “Initial heh doachashmee” feature.

In Mozilla Firefox, with Graphite rendering, features can be accessed using the appropriate CSS markup. A description of how to use the font features in Mozilla Firefox can be found here: [http://scripts.sil.org/cms/scripts/page.php?site\\_id=projects&item\\_id=graphite\\_firefox#cf8a0574](http://scripts.sil.org/cms/scripts/page.php?site_id=projects&item_id=graphite_firefox#cf8a0574).

In XeTeX (TeXLive 2016+) the Feature Name must be used (not the Feature ID). The syntax is in the “Value” field. For example, if the initial round doachashmee is desired, the font selection should be “Awami Nastaliq/GR:Initial heh doachashmee=Round”.

### Known Issues:

- The “Word Spacing” feature does not yet work in current versions of Firefox. Firefox needs to be updated to the latest Graphite engine to support this feature.
- The “Show invisible characters” feature does not correctly handle showing spaces in either Firefox or LibreOffice. Both those applications need to be updated to the latest Graphite engine to support this feature.

## Font features in Awami Nastaliq

| Feature Name                                | Feature ID | Value  | Test Sample |

## End of Ayah and Subtending Marks

This is not technically a feature, but we find it useful to demonstrate the use of these characters.

Firefox allows you to use U+06DD followed by the digits and proper rendering occurs. Some applications require the following:

- precede the entire sequence (subtending mark plus following digits) with 202D LEFT-TO-RIGHT OVERRIDE
- follow the entire sequence with U+202C POP DIRECTIONAL FORMATTING.

Surrounding the sequence with U+202D and U+202C seems to give the most reliable results in different browsers.
